Noise abatement procedures

1. In condition of complying with the requirements of flight safety, the following noise abatement procedures shall be implemented:

- a. The derated take-off is strongly recommended if the take-off performance of aircraft permit;
- b. At ALT 450, adjust engine power/thrust to climb power/thrust and maintain it, maintain climbing speed at V2+10kt with flaps and slats in the take-off configuration;
- c. At ALT 910, maintain a positive rate of climb, accelerate to normal en-route climb speed and retract flaps/slats on schedule.

2. If the procedures can not be implemented due to any reason except ATC, pilot shall inform ATC with a reasonable explanation before take-off (except for special flights such as calibration flights).

Note:

1. Departure turning before DER is forbidden.
2. With average Climb gradient ≥ 4.5% for SAS-61D and PIK-61D to reach SS305 at ALT 2700 or above.
